

MURA: every 2MB block of the 256 GB guest memory scored by H×R — the image buffer wins

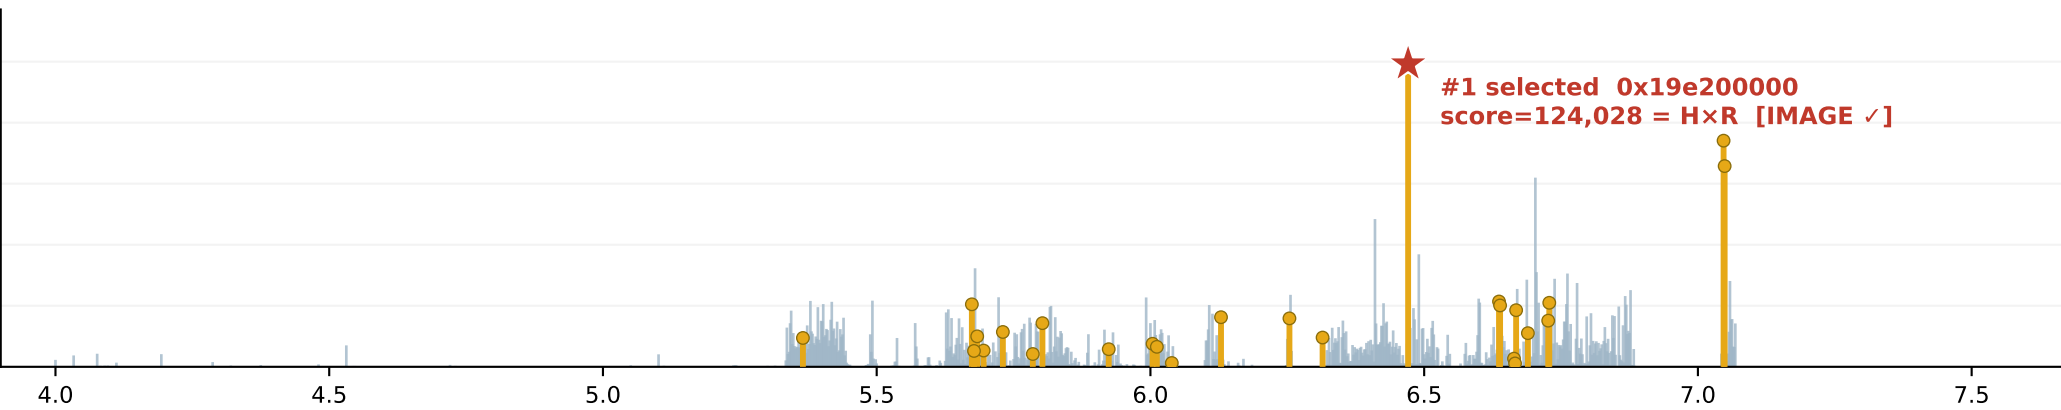

mura1: 1156 active 2MB blocks / 131,072 (256 GB) — populated band 4.00-7.04 GiB

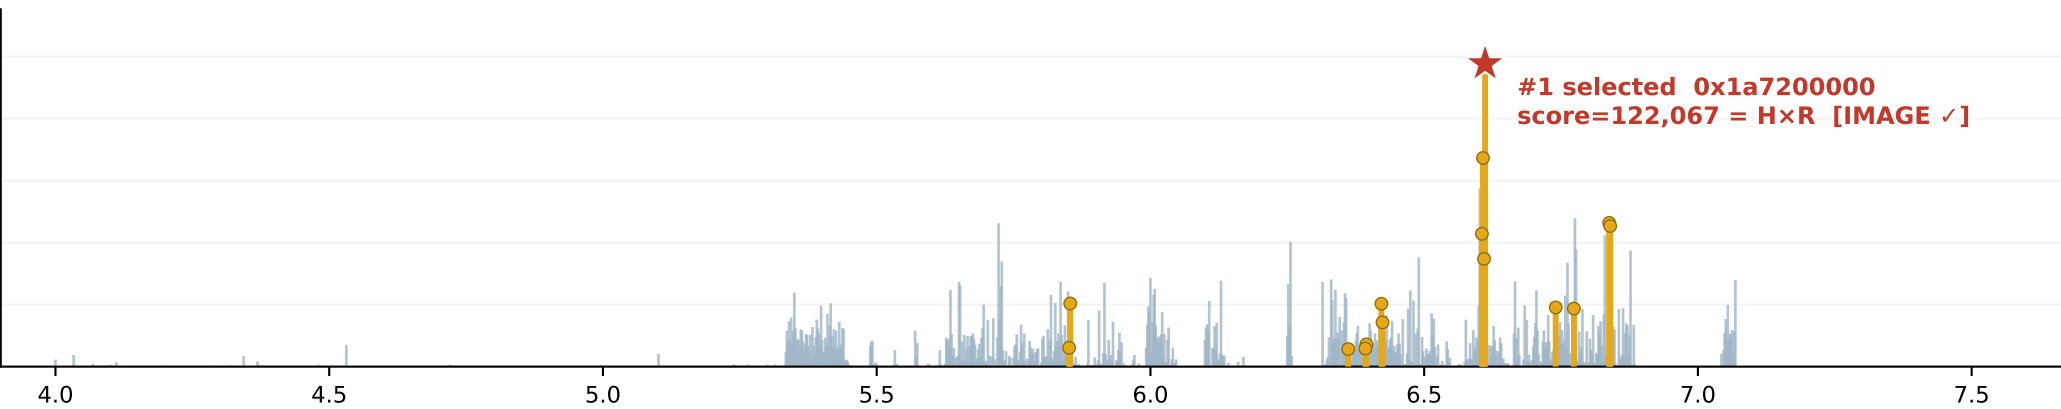

mura2: 906 active 2MB blocks / 131,072 (256 GB) — populated band 4.00-7.07 GiB

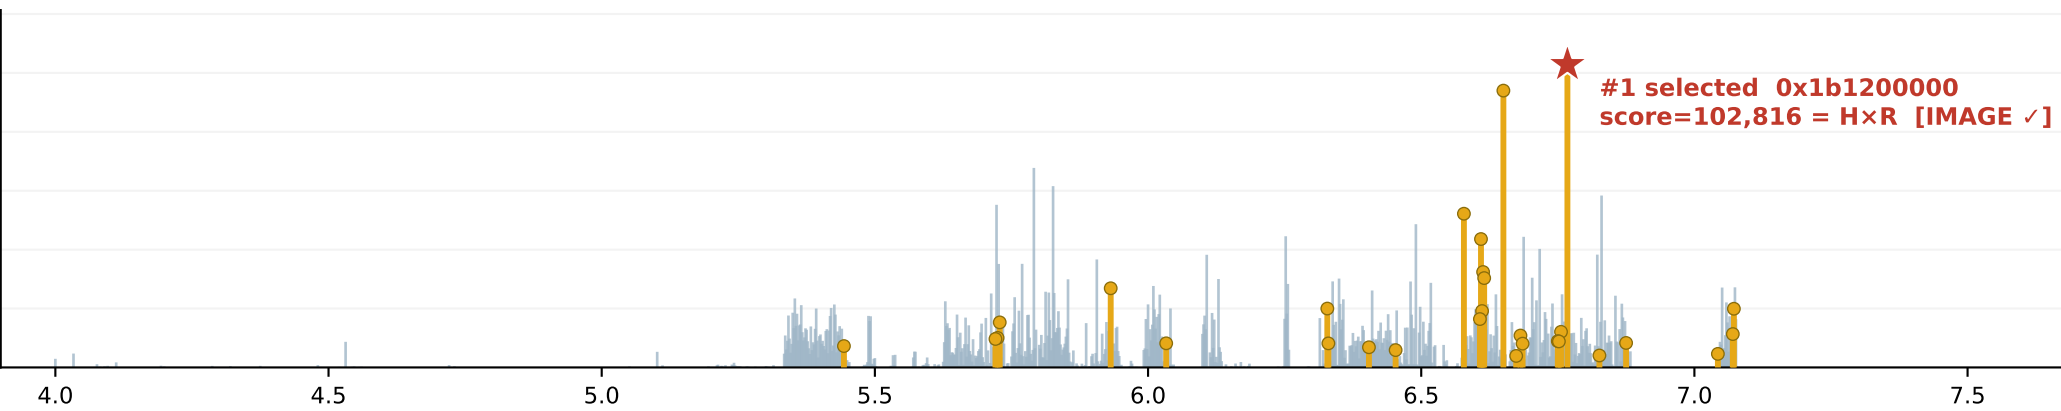

mura3: 906 active 2MB blocks / 131,072 (256 GB) — populated band 4.00-7.07 GiB

mura4: 908 active 2MB blocks / 131,072 (256 GB) — populated band 4.00-7.07 GiB

mura5: 918 active 2MB blocks / 131,072 (256 GB) — populated band 4.00-7.08 GiB

guest physical address (GiB) — each stem = one 2MB block; height = H × R score
